

INFORMATION SECURITY POLICY

We observe and fulfill information security requirements regarding the products and services that are received by our customers as well as those laid out in regulations and legislation. We commit to satisfy the applicable requirements related to information security. We ensure the confidentiality, integrity and availability of information about the organization and stakeholders.

Information security is developed continuously and systematically according to an information security management system. We identify the information security risks and plan the needed actions and controls associated with our operations. Deviations detected and opportunities for improvement observed in our operations are handled openly, and the obtained information is utilized in the continuous improvement of our processes and methods. Information security is monitored and measured with the aid of operative and information security key figures as well as observed non-conformities. External providers' information security is also monitored.

The information security policy applies to all levels in the organization. Our personnel and stakeholders are committed to concealing in their work assignments confidential information to be processed. Each employee is fully aware of their impact on information security, and they are able to initiate and, where necessary, take preventive and corrective actions.
